November 9, 2020

Dear Messrs. Santos Barbosa and Finkelsztain:

I am writing on behalf of the Council of Institutional Investors (CII), a nonprofit, nonpartisan association of U.S. public, corporate and union employee benefit funds, other employee benefit plans, state and local entities charged with investing public assets, and foundations and endowments with combined assets under management of approximately $4 trillion. Our member funds include major long-term shareowners with a duty to protect the retirement savings of millions of workers and their families, including public pension funds with more than 15 million participants. Our associate members include non-U.S. asset owners with about $4 trillion in assets, and a range of asset managers with more than $35 trillion in assets under management.1 CII members have significant capital invested in Brazil, and we share a commitment to healthy public capital markets around the world and strong corporate governance.

We understand that a Working Group within the Ministry of Economy is exploring amendments to the Corporate Law to allow for super-voting shares.2 CII stands alongside Associação de Investidores no Mercado de Capitais (AMEC) in opposing super-voting share structures.3

Reasons to Oppose Super-voting Shares

Since its founding in 1985, CII’s member-approved policies have supported the principle of "one share, one vote": Every share of a public company's common stock should have equal voting

---

1 For more information about the Council of Institutional Investors (CII), including its board and members, please visit CII’s website at http://www.cii.org.
Since then, as more companies have gone public with unequal voting rights, global competition has continued to erode corporate governance standards. While we acknowledge the prominent role U.S. stock exchanges have played in that erosion, we urge Brazil to avoid yielding to this "race to the bottom" pressure, which presents a meaningful risk to long-term performance.

Our primary concerns with the expansion of dual-class shares or “voto plural” are the principal-agent risks that are exacerbated for investors when equity structures skew the alignment of ownership and voting rights. CII believes that when a company goes to the capital markets to raise money from the public, equity investors with the same residual claims should have equal protections and rights, including the right to vote in proportion to the size of their holdings.

**Academic Evidence**

CII’s concerns over unequal voting rights are also supported by a growing body of empirical research that shows that negative effects of unequal voting rights tend to develop in the medium to long-term. In recent years, some new companies with dynamic leadership and innovative ideas that have unequal voting rights have attracted capital on public markets with limited apparent valuation discount in the immediate period after the initial public offering (IPO) because insiders hold super-voting shares. But over time, and on average, the valuation of these firms tends to decline. As the “wedge” between ownership and control widens, the agency costs of insider control and lack of shareholder accountability increase, founders’ entrepreneurial skills and insights that initially propelled a company become dated, and opportunities and risks change in ways not foreseeable by investors at IPO. Moreover, as a key study demonstrates, “controllers

---

have perverse incentives to retain dual-class structures even when those structures become inefficient over time.”

Time-Based Sunsets and Additional Safeguards

We recognize that shareholder voting rights can be perceived by some founders as creating negative short-term pressure in some circumstances, and that there may be pressures in Brazil to expand multi-class shares to attract innovative companies. For this reason, while we oppose any expansion of unequal voting rights, if the CVM nonetheless takes that step, we believe some of the risks can be mitigated through a mandatory time-defined sunset of no more than seven years. As shown above, the body of empirical research indicates that any benefits of holding dual-class stock decline over time, with companies with multi-class shares eventually tending to be undervalued as compared to their peers around this time. We agree that additional safeguards as outlined by AMEC, including a prohibition of super-voting structures for currently listed companies, limits on super-voting shares’ transferability, restrictions on super-voting in certain specific deliberations and mechanisms for the right to withdraw, would also help blunt the impact on low-vote holders.

Thank you for considering our views. We believe that decisions made by the CVM are consequential not only for companies in Brazil but also more broadly in the region and globally. As such, we appreciate the Commission’s careful consideration before reaching any decisions. If we can answer any questions or provide additional information on this matter, please do not hesitate to contact me at +1.202.261.7082 or amy@cii.org.

Sincerely,

Amy Borrus
Executive Director

6 See Bebchuk and Kastiel. Founders and insiders with super-voting rights have strong incentives to retain multi-class structures even after they become inefficient, and investors cannot rely exclusively on private ordering to eliminate multi-class structures that become inefficient with time.

7 See CII summary of six studies.
